feature key.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: KMRL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr1

RP4-604K5 is from the library RPCI-4 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further details see http://bacpac.med.buffalo.edu/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Submitted (17-AUG-2000) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Jul 5, 2000 this sequence version replaced g1:8894634.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                    This sequence is the entire insert of clone RP4-604K5

Title: Perfect score: Sequence:

US-09-676-718A-1 831 1 MAAGPSGCLVPAFGKRLLLA.....ILKWNTDSVEEFLSEKLERI 162

Scoring table:

BLOSUM62 Gapop 10.0 , Gapext 0.5

Searched: 105224 seqs, 38719550 residues

Total number of hits satisfying chosen parameters: 105224

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Database : SwissProt_40:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Protein-tyrosine phosphatase-like N precursor (R-PTP-N) (105 kDa islet cell antigen) (ICA105) (PTP IA-2) (PTPLP) (Brain-enriched membrane-associated protein tyrosine phosphatase) (BEM-3).
          Itoh S., Okada M., Nakagawa H.;

Submitted (FEB-1995) to the EMBL/GenBank/DDBJ databases.

-I-FUNCTION: IMPLICATED IN NEUROENDOCRINE SECRETORY PROCESSES.

INVOLVED IN PROCESSES SPECIFIC FOR NEUROSECRETORY GRAWULES,

AS THEIR BIOGENESIS, TRAFFICKING OR REGULATED EXOCYTOSIS OR

HAVE A GENERAL ROLE IN NEUROENDOCRINE FUNCTIONS. SEEMS TO LA

INTRINSIC ENZYME ACTIVITY (BY SIMILARITY).

-I-FUNCTION: MAY FUNCTION AS A NEGATIVE REGULATOR OF PTPASES IN

NEURONAL TISSUES.
                                                                                                                                                                                                                                                                               "Relationship of the 37,000- and 40,000-M(r) islet antigens in insulin-dependent diabetes phosphatase-like molecule IA-2 (ICA512)."; J. Clin. Invest. 96:1506-1511(1995).
